A neutralization reaction is a chemical reaction when a strong acid and a strong base combine and react with each other to become neutral. 3. When might neutralization reactions be used in a laboratory setting? Neutralization reactions can be used in a lab setting when it is necessary to neutralize a chemical before discarding it down the drain. 4.

The example of an acid base reaction is  $\text{HCl} + \text{NaOH} \rightarrow \text{NaCl} + \text{H}_2\text{O}$ . The acid is the HCl and the base is the NaOH. The salt is the NaCl. When an acid and a base react with each other, a neutralization reaction occurs, forming a salt and water. The water forms from the combination of the  $H^+$  ions from the acid and the  $OH^-$  ions from the base. Strong acids and strong bases
