Two ureters. These narrow tubes carry urine from the kidneys to the bladder. Muscles in the ureter walls continually... Bladder. This triangle-shaped, hollow organ is located in the lower abdomen. It is held in place by ligaments that are... Trigone: a triangle-shaped region near the junction of ...

### **Anatomy of the Urinary System | Johns Hopkins Medicine**

Anatomy of the Urinary System. The urinary system consists of two kidneys, two ureters, a urinary bladder, and a urethra. The kidneys alone perform the functions just described and manufacture urine in the process, while the other organs of the urinary system provide temporary storage reservoirs for urine or serve as transportation channels to carry it from one body region to another.

The urinary system consists of the kidneys, ureters, urinary bladder, and urethra. The kidneys filter the blood to remove wastes and produce urine. The ureters, urinary bladder, and urethra together form the urinary tract, which acts as a plumbing system to drain urine from the kidneys, store it, and then release it during urination.
