Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step

photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

This best-selling textbook addresses the need for an introduction to econometrics specifically written for finance students. Key features: □ Thoroughly revised and updated, including two new chapters on panel data and limited dependent variable models □ Problem-solving approach assumes no prior knowledge of econometrics emphasising intuition rather than formulae, giving students the skills and confidence to estimate and interpret models □ Detailed examples and case studies from finance show students how techniques are applied in real research □ Sample instructions and output from the popular computer package EViews enable students to implement models themselves and understand how to interpret results □ Gives advice on planning and executing a project in empirical finance, preparing students for using econometrics in practice □ Covers important modern topics such as time-series forecasting, volatility modelling, switching models and simulation methods □ Thoroughly class-tested in leading finance schools. Bundle with EViews student version 6 available. Please contact us for more details.

Agathokles of Syracuse ruled large areas of Sicily and southern Italy between 317 and 289 BC. In this book, Christopher de Lisle argues that Agathokles was an important player in the Mediterranean world at a key moment in its history. Agathokles' career has important implications for our definition of the Hellenistic world and its relationship to both the western Mediterranean and earlier Greek history. However, he has tended not to feature in studies of the Hellenistic world or of ancient Sicily. In ancient discourse about him, in the coins he issued, in his interactions with the world around him, and in the way he ruled, Agathokles is simultaneously heir to a long tradition and actively engaged in his contemporary world. The failure to place Agathokles in both of these contexts up till now has contributed to the development of an excessively deep separation between the western and eastern Mediterranean and between the Classical and Hellenistic periods. This work - the first book-length study of Agathokles in English in over a century - places him in the context of both the earlier history of Sicily, and the developments in the eastern Mediterranean that mark the start of the Hellenistic era. The volume includes a narrative of his career, studies of his coinage and his representation in literary sources, and a series of explorations of important themes and regions.

The Complete Idiot's Guide to Motorcycles, Fourth Edition, is the most complete book on motorcycles, covering everything from how to choose and maintain a motorcycle and how to buy appropriate gear, to how to ride safely, and how to make the most out of trips on the open road.

Spine title: Chilton auto tune-up and troubleshooting. On t.p.: Major systems of import cars, domestic cars and light trucks; test equipment and hook-ups.

This book offers an update on recent developments in modern engineering design. Different engineering disciplines, such as mechanical, materials, computer and process engineering, provide the foundation for the design and development of improved structures, materials and processes. The modern design cycle is characterized by the interaction between various disciplines and a strong shift to computer-based approaches where only a few experiments are conducted for verification purposes. A major driver for this development is the increased demand for cost reduction, which is also linked to environmental demands. In the transportation industry (e.g. automotive or aerospace), the demand for higher fuel efficiency is related to reduced operational costs and less environmental damage. One way to fulfil such requirements is lighter structures and/or improved processes for energy conversion. Another emerging area is the interaction of classical engineering with the health and medical sector.

Looks at the reconstructed exhibit of degenerate art censored by the Nazis in 1937

Users can dramatically improve the design, performance, and manageability of object-oriented code without altering its interfaces or behavior. "Refactoring" shows users exactly how to spot the best opportunities for refactoring and exactly how to do it, step by step.

This new edition retains the essential features of Michael West's work and brings the text up to date in various ways. As before it explains the words likely to be encountered in general reading within a vocabulary of 1,455 common words. New headwords added for this edition have been defined within this vocabulary and where a word outside it is used, for example as a cross-reference, it is printed in small capital letters. A new pronunciation system uses that form of the International Phonetic Alphabet which is now found in other Longman dictionaries. A further new feature is a label for each headword showing which part of speech is being defined.
