The bones that comprise the shoulder complex and shoulder joint are the clavicle, scapula, and humerus (Figure 18-2). These three bones form the four major articulations associated with the shoulder complex: the sternoclavicular joint, the acromioclavicular joint, the glenohumeral joint, and the scapulothoracic joint. FIGURE 18-2

INTRODUCTION. + +. The shoulder complex, composed of the clavicle, scapula, and humerus, is an intricately designed combination of three joints that links the upper extremity to the thorax. The articular structures of the shoulder complex are designed primarily for mobility, allowing us to move and position the hand through a wide range of space. The glenohumeral (GH) joint, which links the humerus and scapula, has greater mobility than any other joint in the body.
