Unit 4 // Section 3. Ecosystems maintain themselves by cycling energy and nutrients obtained from external sources. At the first trophic level, primary producers (plants, algae, and some bacteria) use solar energy to produce organic plant material through photosynthesis. Herbivores—animals that feed solely on plants—make up the second trophic level.

Ecosystems Online Textbook - Annenberg Learner

DAY 1. Section 7.1 Freshwater Ecosystems. Objectives. 1. Describe the factors that determine where an organism lives in an aquatic ecosystem. 2. Describe the littoral zone and the benthic zone that make up a lake or pond. 3. Describe two environmental functions of wetlands. 4. Describe one threat against river ecosystems.

pdesas.org

Aquatic Ecosystems Section 1 • Some bodies of fresh water have areas so deep that there is too little light for photosynthesis. • Bacteria live in the deep areas of freshwater. Fish adapted to cooler, darker water also live there. • Eventually, dead and decaying organisms reach the benthic zone.
